Agenda

- Record this Lecture
- Announcements
- Exam 1 Logistics
- Exam Review A: Module 2 and 3

Exam 1 Logistics

- Date and timings :
 - The exam will be in class via Honorlock on Thursday, October 2, 1:55-3:50 pm.
- The exam duration is 1 hr 50 minutes hours.
- You are allowed the following for your exam:
 - one double sided handwritten sheet of notes (letter size/A4 page).
 - 6 double sided blank sheets of scratch paper (letter size/A4 page).

Exam 1 Topics and Expectations

https://docs.google.com/document/d/1XAUGHQE4JWmOsDkkbfTnLFoVi QXySxC-J4XZnK4VTQ/edit?tab=t.0

What is the computational complexity of adding an item to a stack in the worst case in terms of Big O notation?

What is the computational complexity of adding an item to a stack in the worst case in terms of Big O notation?

Answer: 0(1)

Answer: O(n log₂ n)

What is the computational complexity of the following code snippet?

```
int i = 1;
while (i < n)
{
    i = i * m;
}</pre>
```

```
What is the computational complexity of the following code snippet?
int i = 1;
while (i < n)
{
    i = i * m;
}</pre>
```

Answer: O (log_m n)

What is the computational complexity of the following code snippet?

```
result = 0
for (int i = 0; i < n; i++)
  result += i;
for (int j = 1; j < m; j *= 2)
  result *= j;</pre>
```

What is the computational complexity of the following code snippet?

```
result = 0
for (int i = 0; i < n; i++)
  result += i;
for (int j = 1; j < m; j *= 2)
  result *= j;</pre>
```

Answer: O(n+log₂ m)

What is the computational complexity of the following code snippet?
for (int i=n; i>0; i/=2)
 for (int j=1; j<i; j++)
 sum = sum + 1;</pre>

```
What is the computational complexity of the following code snippet?
for (int i=n; i>0; i/=2)
    for (int j=1; j<i; j++)
        sum = sum + 1;</pre>
```

Answer: O(n)

Which code snippet will take less time to execute on a computer?

```
A
for (int i=1; i < n; i++)
for (int j=1; j < n; j++)
sum = sum + 1;

for (int i=1; i < 2n; i++)
for (int j=1; j < 2n; j++)
sum = sum + 1;
```

Which code snippet will take less time to execute on a computer?

```
A
for (int i=1; i < n; i++)
for (int j=1; j < n; j++)

sum = sum + 1;

For (int i=1; i < 2n; i++)
for (int j=1; j < 2n; j++)
sum = sum + 1;
```

Answer: A

Which code snippet will have a higher growth rate asymtotically in terms of Big O notation?

```
A
for (int i=1; i < n; i++)
for (int j=1; j < n; j++)

sum = sum + 1;

for (int i=1; i < 2n; i++)
for (int j=1; j < 2n; j++)

sum = sum + 1;
```

Which code snippet will have a higher growth rate asymptotically in terms of Big O notation?

```
A
for (int i=1; i < n; i++)
for (int j=1; j < n; j++)

sum = sum + 1;

For (int i=1; i < 2n; i++)
for (int j=1; j < 2n; j++)

sum = sum + 1;
```

Answer: A and B grow at the same rate asymtotically

Mini Review - Linked Lists

Consider a class List that implements an ordered list backed by a singly linked list with a head pointer. The invariant "ordered" is maintained always. Given that representation, what is the worst-case time complexity of the following operations? Assume the list is sorted in ascending order.

- A. Insert an item
- B. Finding the minimum element
- C. Delete the largest element from list
- D. Finding the largest element
- E. Finding a random element, n
- F. Deleting the minimum element in the list

Mini Review - Linked Lists

Consider a class List that implements an ordered list backed by a singly linked list with a head pointer. The invariant "ordered" is maintained always. Given that representation, what is the worst-case time complexity of the following operations? Assume the list is sorted in ascending order.

```
A. Insert an item: O(n)
B. Finding the minimum element: O(1)
C. Delete the largest element from list: O(n)
D. Finding the largest element: O(n)
E. Finding a random element, n: O(n)
F. Deleting the minimum element in the list: O(1)
```

Mini Review - Stacks

Postfix Evaluation "2 3 1 * + 9 -". We scan all elements one by one.

Mini Review - Stacks

Postfix Evaluation "2 3 1 * + 9 -". We scan all elements one by one.

- 1) Scan '2', it's a number, so push it to stack. Stack contains '2'
- 2) Scan '3', again a number, push it to stack, stack now contains '2 3' (from bottom to top)
- 3) Scan '1', again a number, push it to stack, stack now contains '2 3 1'
- 4) Scan '*', it's an operator, pop two operands from stack, apply the * operator on operands, we get 3*1 which results in 3. We push the result '3' to stack. Stack now becomes '2 3'.
- 5) Scan '+', it's an operator, pop two operands from stack, apply the + operator on operands, we get 3 + 2 which results in 5. We push the result '5' to stack. Stack now becomes '5'.
- 6) Scan '9', it's a number, we push it to the stack. Stack now becomes '5 9'.
- 7) Scan '-', it's an operator, pop two operands from stack, apply the operator on operands, we get 5 9 which results in -4. We push the result '-4' to stack. Stack now becomes '-4'.
- 8) There are no more elements to scan, we return the top element from stack (which is the only element left in stack).

Output Prediction / Coding Questions

https://onlinegdb.com/BJ4hyD7vP
https://onlinegdb.com/BJ6gewQDP
https://onlinegdb.com/OefiHIntV

- Check whether a string is a Palindrome using a Stack.
- Write C++ code for adding an element in the rear in a doubly linked list consisting of a head and tail.
- Write C++ code to find the median in a single linked using slow and fast pointer technique. –
 Edugator 4.5

• Design a Stack data structure in C++ that supports push, pop and min operations in O(1) time. You can use an STL Tack if needed.

Design a Stack data structure in C++ that supports push, pop and min operations in O(1) time.
 You can use an STL Tack if needed.

```
class MinStack {
    private:
        stack<int> s;  // main stack
        stack<int> minStack; // keeps track of current minimums
    public:
        // Push an element onto the stack
        void push(int x) {
            s.push(x);
            // If minStack is empty or x <= current min, push to minStack</pre>
            if (minStack.empty() || x <= minStack.top())</pre>
                minStack.push(x);
            else
                minStack.push(minStack.top());
```

Design a Stack data structure in C++ that supports push, pop and min operations in O(1) time.
 You can use an STL Tack if needed.

```
// Pop the top element
       void pop() {
           if (s.empty())
                throw underflow error("Stack is empty");
           s.pop();
           minStack.pop();
       // Get the current minimum in O(1)
       int min() {
            if (minStack.empty()) {
                throw underflow error("Stack is empty");
            return minStack.top();
};
```
